

S&D Real Estate

27 E. Jericho Turnpike
Mineola, NY 11501
(516) 248-6905

Dear Applicant,

Thank you for your expressed interest in housing at the Mitchel Field Veteran and Active Military Housing Community.

Attached with this letter you will find the necessary documents to complete the application process. Once all documents are filled out please submit them by mail or email. You will receive confirmation of receipt of application from our office manager via email.

Application Checklist:

- Completed Application with signed Permission to Access Credit and Background Check
- Copy of DD-214 Form
- Executed New York State Landlord to Tenant Disclosure Form
- Executed New York State Housing and Anti-Discrimination Form
- Lead Paint Addendum & Pamphlet
- ***Note: If you are receiving rental assistance please include the required paperwork from the respective agencies aiding.***

Applications Submitted by Mail:

- 27 E. Jericho Turnpike, Mineola, NY 11501

Applications Submitted by E-Mail:

- housing@sdnyrealty.com

For additional information on the application process, or if you wish to set up an appointment to tour the Mitchel Field Housing Community, please send an email to housing@sdnyrealty.com, and one of our Property Manager's will contact you.

Once again, we thank you for your expressed interest, and look forward to hearing from you soon!

Thank you.

Smith & DeGroat Real Estate, as Agents for Nassau County

Veterans & Military Housing

We are committed to providing a safe environment for our Veterans and Active Military.

FOR RENT

\$2,800/Electric Included

PROPERTY FEATURES

1,200 square-foot duplex home
3 bedrooms / 1 bathroom
Kitchen / Sunroom
Full basement / Garage
Washer/dryer hook-up
Pest Control
Landscaping services
Trash and snow removal
Use of gym facility
On-site management

Additional Information: The Mitchel Field Housing Complex is located in East Garden City, New York, and currently offers housing for forty-two (42) veteran families and eighteen (18) active military families. The facility has deep roots with the military, dating all the way back to 1898 during the Spanish-American War.

Contact Information: For additional information, please contact property management, S&D Real Estate, via phone (516-248-6905) or via email (housing@sdnyrealty.com).

By signing the application, you grant us permission to communicate with all the contacts listed in this section in the event we can't locate you. Furthermore, if you abandon the apartment for any reason then you grant us permission to allow your relative listed above to remove all contents of the dwelling on your behalf.

GENERAL INFORMATION

Have you ever been served a late rent notice?	Do any of the people who would be living in the apartment smoke?	How long do you think you would be renting from us?
Desired Date of Occupancy?	Housing Agency (If Applicable)	
Have you ever filed for bankruptcy? If so, when?	When would you be able to move in?	Have you ever been convicted of a felony?
Have you ever been served an eviction notice? If so, when?	How many pets do you have (list Type, Breed, approx. Weight & Age)?	
Have you had any reoccurring problems with your current apartment or landlord? If yes, please explain:		
Why are you moving from your current address?		
List any verifiable sources and amounts of income you wish to have considered (optional):		
Have you been a party to a lawsuit in the past? If yes, please explain why:		
We will run a credit check and a criminal background check. Is there anything negative we will find that you want to comment on?		
How did you hear about this apartment?	Do you have an e-mail address we can reach you at?	

Agreement & Authorization Signature

The statements I have made are true and correct. I hereby authorize a credit and/or criminal check to be made, verification of information I provided and communication with any and all names listed on this application. I understand that any discrepancy or lack of information may result in the rejection of this application. I understand that this is an application for an apartment and does not constitute a rental or lease agreement in whole or part. I further understand that there is a **non-refundable** fee to cover the cost of processing my application and I am not entitled to a refund even if I don't get the apartment.

New York State Housing and Anti-Discrimination Disclosure Form

Federal, State and local Fair Housing and Anti-discrimination Laws provide comprehensive protections from discrimination in housing. It is unlawful for any property owner, landlord, property manager or other person who sells, rents or leases housing, to discriminate based on certain protected characteristics, which include, but are not limited to **race, creed, color, national origin, sexual orientation, gender identity or expression, military status, sex, age, disability, marital status, lawful source of income or familial status**. Real estate professionals must also comply with all Fair Housing and Anti-discrimination Laws.

Real estate brokers and real estate salespersons, and their employees and agents violate the Law if they:

- Discriminate based on any protected characteristic when negotiating a sale, rental or lease, including representing that a property is not available when it is available.
- Negotiate discriminatory terms of sale, rental or lease, such as stating a different price because of race, national origin or other protected characteristic.
- Discriminate based on any protected characteristic because it is the preference of a seller or landlord.
- Discriminate by “steering” which occurs when a real estate professional guides prospective buyers or renters towards or away from certain neighborhoods, locations or buildings, based on any protected characteristic.
- Discriminate by “blockbusting” which occurs when a real estate professional represents that a change has occurred or may occur in future in the composition of a block, neighborhood or area, with respect to any protected characteristics, and that the change will lead to undesirable consequences for that area, such as lower property values, increase in crime, or decline in the quality of schools.
- Discriminate by pressuring a client or employee to violate the Law.
- Express any discrimination because of any protected characteristic by any statement, publication, advertisement, application, inquiry or any Fair Housing Law record.

YOU HAVE THE RIGHT TO FILE A COMPLAINT

If you believe you have been the victim of housing discrimination you should file a complaint with the New York State Division of Human Rights (DHR). Complaints may be filed by:

- Downloading a complaint form from the DHR website: www.dhr.ny.gov;
- Stop by a DHR office in person, or contact one of the Division’s offices, by telephone or by mail, to obtain a complaint form and/or other assistance in filing a complaint. A list of office locations is available online at: <https://dhr.ny.gov/contact-us>, and the Fair Housing HOTLINE at (844)-862-8703.

You may also file a complaint with the NYS Department of State, Division of Licensing Services. Complaints may be filed by:

- Downloading a complaint form from the Department of State’s website
https://www.dos.ny.gov/licensing/complaint_links.html
- Stop by a Department’s office in person, or contact one of the Department’s offices, by telephone or by mail, to obtain a complaint form.
- Call the Department at (518) 474-4429.

There is no fee charged to you for these services. It is unlawful for anyone to retaliate against you for filing a complaint.

New York State Disclosure Form for Landlord and Tenant

THIS IS NOT A CONTRACT

New York State law requires real estate licensees who are acting as agents of landlords and tenants of real property to advise the potential landlords and tenants with whom they work of the nature of their agency relationship and the rights and obligations it creates. This disclosure will help you to make informed choices about your relationship with the real estate broker and its sales agents.

Throughout the transaction you may receive more than one disclosure form. The law may require each agent assisting in the transaction to present you with this disclosure form. A real estate agent is a person qualified to advise about real estate.

If you need legal, tax or other advice, consult with a professional in that field.

Disclosure Regarding Real Estate Agency Relationships

Landlord's Agent

A landlord's agent is an agent who is engaged by a landlord to represent the landlord's interest. The landlord's agent does this by securing a tenant for the landlord's apartment or house at a rent and on terms acceptable to the landlord. A landlord's agent has, without limitation, the following fiduciary duties to the landlord: reasonable care, undivided loyalty, confidentiality, full disclosure, obedience and duty to account. A landlord's agent does not represent the interests of the tenant. The obligations of a landlord's agent are also subject to any specific provisions set forth in an agreement between the agent and the landlord. In dealings with the tenant, a landlord's agent should (a) exercise reasonable skill and care in performance of the agent's duties; (b) deal honestly, fairly and in good faith; and (c) disclose all facts known to the agent materially affecting the value or desirability of property, except as otherwise provided by law.

Tenant's Agent

A tenant's agent is an agent who is engaged by a tenant to represent the tenant's interest. The tenant's agent does this by negotiating the rental or lease of an apartment or house at a rent and on terms acceptable to the tenant. A tenant's agent has, without limitation, the following fiduciary duties to the tenant: reasonable care, undivided loyalty, confidentiality, full disclosure, obedience and duty to account. A tenant's agent does not represent the interest of the landlord. The obligations of a tenant's agent are also subject to any specific provisions set forth in an agreement between the agent and the tenant. In dealings with the landlord, a tenant's agent should (a) exercise reasonable

skill and care in performance of the agent's duties; (b) deal honestly, fairly and in good faith; and (c) disclose all facts known to the agent materially affecting the tenant's ability and/or willingness to perform a contract to rent or lease landlord's property that are not consistent with the agent's fiduciary duties to the tenant.

Broker's Agents

A broker's agent is an agent that cooperates or is engaged by a listing agent or a tenant's agent (but does not work for the same firm as the listing agent or tenant's agent) to assist the listing agent or tenant's agent in locating a property to rent or lease for the listing agent's landlord or the tenant agent's tenant. The broker's agent does not have a direct relationship with the tenant or landlord and the tenant or landlord cannot provide instructions or direction directly to the broker's agent. The tenant and the landlord therefore do not have vicarious liability for the acts of the broker's agent. The listing agent or tenant's agent do provide direction and instruction to the broker's agent and therefore the listing agent or tenant's agent will have liability for the acts of the broker's agent.

Dual Agent

A real estate broker may represent both the tenant and the landlord if both the tenant and landlord give their informed consent in writing. In such a dual agency situation, the agent will not be able to provide the full range of fiduciary duties to the landlord and the tenant. The obligations of an agent are also subject to any specific provisions set forth in an agreement between the agent, and the tenant and landlord. An agent acting as a dual agent must explain carefully to both the landlord and tenant that the agent is acting for the other party as well. The agent should also explain the possible effects of dual representation, including that by consenting to the dual agency relationship the landlord and tenant are giving up their right to undivided loyalty. A landlord and tenant should carefully consider the possible consequences of a dual agency relationship before agreeing to such representation. A landlord or tenant may provide advance informed consent to dual agency by indicating the same on this form.

Dual Agent with Designated Sales Agents

If the tenant and the landlord provide their informed consent in writing, the principals and the real estate broker who represents both parties as a dual agent may designate a sales agent to represent the tenant and another sales agent to represent the landlord. A sales agent works under the supervision of the real estate broker. With the informed consent in writing of the tenant and the landlord, the designated sales agent for the tenant will function as the

New York State Disclosure Form for Landlord and Tenant

tenant's agent representing the interests of and advocating on behalf of the tenant and the designated sales agent for the landlord will function as the landlord's agent representing the interests of and advocating on behalf of the landlord in the negotiations between the tenant and the landlord. A designated sales agent cannot provide the full range of fiduciary duties to the landlord or tenant. The designated sales agent must explain that like the dual agent under

whose supervision they function, they cannot provide undivided loyalty. A landlord or tenant should carefully consider the possible consequences of a dual agency relationship with designated sales agents before agreeing to such representation. A landlord or tenant may provide advance informed consent to dual agency with designated sales agents by indicating the same on this form.

This form was provided to me by _____ of _____

LEAD BASED PAINT ADDENDUM

DISCLOSURE: All homes within the Mitchel Field Housing Complex were built prior to 1978, and contain lead-based paint. Each home has undergone a remediation process and is regularly tested for the presence of lead-based paint. This addendum is for informational purposes only, however, we ask that you acknowledge receipt by executing this document and sending it back with the remaining documents within the application process.

ADDITIONAL INFORMATION AND DISCLOSURES regarding unit specific information will be provided prior to occupancy and one of our property managers will review all materials with you. This addendum and further disclosures can be provided in other languages by request.

PROTECT YOUR FAMILY FROM LEAD IN YOUR HOME. Are you planning to buy, rent, or renovate a home built before 1978?

Many houses and apartments built before 1978 have paint that contains lead (called lead-based paint). Lead from paint, chips, and dust can pose serious health hazards if not taken care of properly.

By 1996, federal law will require that individuals receive certain information before renting, buying, or renovating pre-1978 housing:

OWNERS will have to disclose known information on lead-based paint hazards before leases take effect. Leases will include a federal form about lead-based paint.

SELLERS will have to disclose known information on lead-based paint hazards before selling a house. Sales contracts will include a federal form about lead-based paint in the building. Buyers will have up to 10 days to check for lead hazards.

RENOVATORS will have to give you this pamphlet before starting work.

IMPORTANT! Lead From Paint, Dust, and Soil Can Be Dangerous If Not Managed Properly.

FACT: Lead exposure can harm young children and babies even before they are born.

FACT: Even children that seem healthy can have high levels of lead in their bodies.

FACT: People can get lead in their bodies by breathing or swallowing lead dust, or by eating soil or paint chips with lead in them.

FACT: People have many options for reducing lead hazards. In most cases, lead-based paint that is in good condition is not a hazard.

FACT: Removing lead-based paint improperly can increase the danger to your family.

If you think your home might have lead hazards, read this material to learn some simple steps to protect your family.

Lead Gets in the Body in Many Ways

People can get lead in their body if they:

- Put their hands or other objects covered with lead dust in their mouths.
- Eat paint chips or soil that contains lead.
- Breathe in lead dust (especially during renovations that disturb painted surfaces.)

Lead is even more dangerous to children than adults because:

- Babies and young children often put their hands and other objects in their mouths. These objects can have lead dust on them.
- Children's growing bodies absorb more lead.
- Children's brains and nervous systems are more sensitive to the damaging effects of lead.

Lead's Effects

If not detected early, children with high levels of lead in their bodies can suffer from:

- Damage to the brain and nervous system
- Behavior and learning problems (such as hyperactivity)
- Slowed growth
- Hearing growth
- Headaches

Lead is also harmful to adults. Adults can suffer from:

- Difficulties during pregnancy
- Other reproductive problems (in both men and women)
- High blood pressure
- Digestive problems
- Nerve disorders
- Memory and concentration problems
- Muscle and joint pain

Checking Your Family for Lead

A simple blood test can detect high levels of lead. Blood tests are important for:

- Children who are 6 months to 1 year old (6 months if you live in an older home with cracking or peeling paint).
- Family members that you think might have high levels of lead.

If your child is older than 1 year, talk to your doctor about whether your child needs testing.

Your doctor or health center can do blood tests. They are inexpensive and sometimes free. Your doctor will explain what the test results mean. Treatment can range from changes in your diet to medication or a hospital stay.

Where Lead-Based Paint Is Found

Many homes built before 1978 have lead-based paint. The federal government banned lead-based paint from housing in 1978. Some states stopped its use even earlier. Lead can be found:

- In homes in the city, country, or suburbs.
- In apartments, single-family homes, and both private and public housing.
- Inside and outside of the house.
- In soil around a home. (Soil can pick up lead from exterior paint, or other sources such as past use of leaded gas in cars.)

Where Lead Is Likely To Be a Hazard

Lead-based paint that is in good condition is usually not a hazard. Peeling, chipping, chalking, or cracking lead-based paint is a hazard and needs immediate attention. Lead-based paint may also be a hazard when found on surfaces that children can chew or that get a lot of wear-and-tear. These areas include:

- Windows and window sills.
- Doors and door frames.
- Stairs, railings, and banisters.
- Porches and fences.

Lead dust can form when lead-based paint is dry scraped, dry sanded, or heated. Dust also forms when painted surfaces bump or rub together. Lead chips and dust can get on surfaces and objects that people touch. Settled lead dust can reenter the air when people vacuum, sweep, or walk through it.

Lead in soil can be a hazard when children play in bare soil or when people bring soil into the house on their shoes. Call your state agency to find out about soil testing for lead.

Checking Your Home for Lead Hazards

You can get your home checked for lead hazards in one of two ways, or both:

- A paint inspection tells you the lead content of every painted surface in your home. It won't tell you whether the paint is a hazard or how you should deal with it.
- A risk assessment tells you if there are any sources of serious lead exposure (such as peeling paint and lead dust). It also tells you what actions to take to address these hazards.

Have qualified professionals do the work. The federal government is writing standards for inspectors and risk assessors. Some states might already have standards in place. Call your state agency for help with locating qualified professionals in your area.

Trained professionals use a range of methods when checking your home, including:

- Visual inspection of paint condition and location.
- Lab tests of paint samples.
- Surface dust tests.
- A portable x-ray fluorescence machine.

Home test kits for lead are available, but recent studies suggest that they are not always accurate. Consumers should not rely on these tests before doing renovations or to assure safety.

What You Can Do Now To Protect Your Family

If you suspect that your house has lead hazards, you can take some immediate steps to reduce your family's risk:

- If you rent, notify your Owner of peeling or chipping paint.
- Clean up paint chips immediately.
- Clean floors, window frames, window sills, and other surfaces weekly. Use a mop or sponge with warm water and a general all-purpose cleaner or a cleaner made specifically for lead. **REMEMBER: NEVER MIX AMMONIA AND BLEACH PRODUCTS TOGETHER SINCE THEY CAN FORM A DANGEROUS GAS.**
- Thoroughly rinse sponges and mop heads after cleaning dirty or dusty areas.
- Wash children's hands often, especially before they eat and before nap time and bed time.
- Keep play areas clean. Wash bottles, pacifiers, toys, and stuffed animals regularly.
- Keep children from chewing window sills or other painted surfaces.
- Clean or remove shoes before entering your home to avoid tracking in lead from soil.
- Make sure children eat nutritious, low-fat meals high in iron and calcium, such as spinach and low-fat dairy products. Children with good diets absorb less lead.

How To Significantly Reduce Lead Hazards

In addition to day-to-day cleaning and good nutrition:

- **You can** temporarily reduce lead hazards by taking actions such as repairing damaged painted surfaces and planting grass to cover soil with high lead levels. These actions (called "interim controls") are not permanent solutions and will need ongoing attention.

To **permanently** remove lead hazards, you must hire a lead abatement contractor. Abatement (or permanent hazard elimination) methods include removing, sealing, or enclosing lead-based paint with special materials. Just painting over the hazard with regular paint is not enough.

Always hire a person with special training for correcting lead problems-someone who knows how to do this work safely and has the proper equipment to clean up thoroughly. If possible, hire a certified lead abatement contractor.

Certified contractors will employ qualified workers and follow strict safety rules as set by their state or by the federal government.

Call your state agency for help with locating qualified contractors in your area and to see if financial assistance is available.

Remodeling or Renovating a Home With Lead-Based Paint

Take precautions before you begin remodeling or renovations that disturb painted surfaces (such as scraping off paint or tearing out walls):

- Have the area tested for lead-based paint.
- Do not use a dry scraper, belt-sander, propane torch, or heat gun to remove lead-based paint. These actions create large amounts of lead dust and fumes. Lead dust can remain in your home long after the work is done.
- **Temporarily move your family** (especially children and pregnant women) out of the apartment or house until the work is done and the area is properly cleaned. If you can't move your family, at least completely seal off the work area.
- **Follow other safety measures to reduce lead hazards.** You can find out about other safety measures by calling 1-800-424-LEAD. Ask for the brochure "Reducing Lead Hazards When Remodeling Your Home." This brochure explains what to do before, during, and after renovations.

If you have already completed renovations or remodeling that could have released lead-based paint or dust, get your young children tested and follow the steps outlined on page 1.

Other Sources of Lead

- **Drinking water.** Your home might have plumbing with lead or lead solder. Call your local health department or water supplier to find out about testing your water. You cannot see, smell, or taste lead, and boiling your water will not get rid of lead. If you think your plumbing might have lead in it:
 - Use only cold water for drinking and cooking.
 - Run water for 15 to 30 seconds before drinking it, especially if you have not used your water for a few hours.
- The job. If you work with lead, you could bring it home on your hands or clothes. Shower and change clothes before coming home. Launder your clothes separately from the rest of your family's.
- Old painted toys and furniture.
- Food and liquids stored in lead crystal or lead-glazed pottery or porcelain.
- Lead smelters or other industries that release lead into the air.
- Hobbies that use lead, such as making pottery or stained glass, or refinishing furniture.
- Folk remedies that contain lead, such as "greta" and "azarcon" used to treat an upset stomach.

If You Think Your Home Has High Levels Of Lead

- Get your young children tested for lead, even if they seem healthy.
- Wash children's hands, bottles, pacifiers, and toys often.
- Make sure children eat healthy, low-fat foods.
- Get your home checked for lead hazards.
- Regularly clean floors, window sills, and other surfaces.
- Wipe soil off shoes before entering house.
- Talk to your Owner about fixing surfaces with peeling or chipping paint.
- Take precautions to avoid exposure to lead dust when remodeling or renovating (call 1-800-424-LEAD for guidelines).
- Don't use a belt-sander, propane torch, dry scraper, or dry sandpaper on painted surfaces that may contain lead.
- Don't try to remove lead-based paint yourself.

For More Information

The National Lead Information Center

Call 1-800-LEAD-FYI to learn how to protect children from lead poisoning.

For other information on lead hazards, call the center's clearinghouse at 1-800-424-LEAD. For the hearing impaired, call TDD 1-800-526-5456 (FAX: 202-659-1192, Internet: EHC@CAIS.COM).

EPA's Safe Drinking Water Hotline:
Call 1-800-426-4791 for information about lead in drinking water.

Consumer Product Safety Commission Hotline
To request information on lead in consumer products, or to report an unsafe consumer product or a product-related injury call 1-800-638-2772. (Internet: info@cpsc.gov). For the hearing impaired, call TDD 1-800-638-8270.

Disclosure of Information on Lead-Based Paint and/or Lead-Based Paint Hazards

Lead Warning Statement

Housing built before 1978 may contain lead-based paint. Lead from paint, paint chips, and dust can pose health hazards if not managed properly. Lead exposure is especially harmful to young children and pregnant women. Before renting pre-1978 housing, landlords must disclose the presence of known lead-based paint and/or lead-based paint hazards in the dwelling. Residents must also receive a federally approved pamphlet on lead poisoning prevention.

Landlord's Disclosure

(a) Presence of lead-based paint and/or lead-based paint hazards (check (i) or (ii) below):

(i) X Known lead-based paint and/or lead-based paint hazards are present in the home (explain).

Additional Documents will be provided in person, at a later date, prior to occupancy.

(ii)_____Landlord has no knowledge of lead-based paint and/or lead-based paint hazards in the home.

(b) Records and reports available to the Landlord (check (i) or (ii) below):

X
(i)_____Landlord has provided the Resident with all available records and reports pertaining to lead-based paint and/or lead-based paint hazards in the home (list documents below).

Additional Documents will be provided in person, at a later date, prior to occupancy.

(ii)_____Landlord has no reports or records pertaining to lead-based paint and/or lead-based paint hazards in the home.

Resident’s Acknowledgment (initial)

- (c)_____Resident has received copies of all information listed above.
- (d)_____Resident has received the pamphlet **Protect Your Family from Lead in Your Home.**

Agent’s Acknowledgment (initial)

(e) MS Agent has informed the Landlord of the Landlord’s obligations under 42 U.S.C. 4852(d) and is aware of his/her responsibility to ensure compliance.

Certification of Accuracy: The following parties have reviewed the information above and certify, to the best of their knowledge, that the information they have provided is true and accurate.

Date

June 30, 2022 - Agent

Date

IMPORTANT!

Lead From Paint, Dust, and Soil in and Around Your Home Can Be Dangerous if Not Managed Properly

- Children under 6 years old are most at risk for lead poisoning in your home.
- Lead exposure can harm young children and babies even before they are born.
- Homes, schools, and child care facilities built before 1978 are likely to contain lead-based paint.
- Even children who seem healthy may have dangerous levels of lead in their bodies.
- Disturbing surfaces with lead-based paint or removing lead-based paint improperly can increase the danger to your family.
- People can get lead into their bodies by breathing or swallowing lead dust, or by eating soil or paint chips containing lead.
- People have many options for reducing lead hazards. Generally, lead-based paint that is in good condition is not a hazard (see page 10).

Protect Your Family From Lead in Your Home

Are You Planning to Buy or Rent a Home Built Before 1978?

Did you know that many homes built before 1978 have **lead-based paint**? Lead from paint, chips, and dust can pose serious health hazards.

Read this entire brochure to learn:

- How lead gets into the body
- How lead affects health
- What you can do to protect your family
- Where to go for more information

Before renting or buying a pre-1978 home or apartment, federal law requires:

- Sellers must disclose known information on lead-based paint or lead-based paint hazards before selling a house.
- Real estate sales contracts must include a specific warning statement about lead-based paint. Buyers have up to 10 days to check for lead.
- Landlords must disclose known information on lead-based paint or lead-based paint hazards before leases take effect. Leases must include a specific warning statement about lead-based paint.

If undertaking renovations, repairs, or painting (RRP) projects in your pre-1978 home or apartment:

- Read EPA's pamphlet, *The Lead-Safe Certified Guide to Renovate Right*, to learn about the lead-safe work practices that contractors are required to follow when working in your home (see page 12).

Consumer Product Safety Commission (CPSC)

The CPSC protects the public against unreasonable risk of injury from consumer products through education, safety standards activities, and enforcement. Contact CPSC for further information regarding consumer product safety and regulations.

Simple Steps to Protect Your Family from Lead Hazards

If you think your home has lead-based paint:

- Don't try to remove lead-based paint yourself.
- Always keep painted surfaces in good condition to minimize deterioration.
- Get your home checked for lead hazards. Find a certified inspector or risk assessor at [epa.gov/lead](https://www.epa.gov/lead).
- Talk to your landlord about fixing surfaces with peeling or chipping paint.
- Regularly clean floors, window sills, and other surfaces.
- Take precautions to avoid exposure to lead dust when remodeling.
- When renovating, repairing, or painting, hire only EPA- or state-approved Lead-Safe certified renovation firms.
- Before buying, renting, or renovating your home, have it checked for lead-based paint.
- Consult your health care provider about testing your children for lead. Your pediatrician can check for lead with a simple blood test.
- Wash children's hands, bottles, pacifiers, and toys often.
- Make sure children eat healthy, low-fat foods high in iron, calcium, and vitamin C.
- Remove shoes or wipe soil off shoes before entering your house.

Lead Gets into the Body in Many Ways

Adults and children can get lead into their bodies if they:

- Breathe in lead dust (especially during activities such as renovations, repairs, or painting that disturb painted surfaces).
- Swallow lead dust that has settled on food, food preparation surfaces, and other places.
- Eat paint chips or soil that contains lead.

Lead is especially dangerous to children under the age of 6.

- At this age, children's brains and nervous systems are more sensitive to the damaging effects of lead.
- Children's growing bodies absorb more lead.
- Babies and young children often put their hands and other objects in their mouths. These objects can have lead dust on them.

Women of childbearing age should know that lead is dangerous to a developing fetus.

- Women with a high lead level in their system before or during pregnancy risk exposing the fetus to lead through the placenta during fetal development.

For More Information

The National Lead Information Center

Learn how to protect children from lead poisoning and get other information about lead hazards on the Web at epa.gov/lead and hud.gov/lead, or call **1-800-424-LEAD (5323)**.

EPA's Safe Drinking Water Hotline

For information about lead in drinking water, call **1-800-426-4791**, or visit epa.gov/safewater for information about lead in drinking water.

Consumer Product Safety Commission (CPSC) Hotline

For information on lead in toys and other consumer products, or to report an unsafe consumer product or a product-related injury, call **1-800-638-2772**, or visit CPSC's website at cpsc.gov or saferproducts.gov.

State and Local Health and Environmental Agencies

Some states, tribes, and cities have their own rules related to lead-based paint. Check with your local agency to see which laws apply to you. Most agencies can also provide information on finding a lead abatement firm in your area, and on possible sources of financial aid for reducing lead hazards. Receive up-to-date address and phone information for your state or local contacts on the Web at epa.gov/lead, or contact the National Lead Information Center at **1-800-424-LEAD**.

Hearing- or speech-challenged individuals may access any of the phone numbers in this brochure through TTY by calling the toll-free Federal Relay Service at **1-800-877-8339**.

Other Sources of Lead, continued

- **Lead smelters** or other industries that release lead into the air.
- **Your job.** If you work with lead, you could bring it home on your body or clothes. Shower and change clothes before coming home. Launder your work clothes separately from the rest of your family's clothes.
- **Hobbies** that use lead, such as making pottery or stained glass, or refinishing furniture. Call your local health department for information about hobbies that may use lead.
- Old **toys** and **furniture** may have been painted with lead-containing paint. Older toys and other children's products may have parts that contain lead.⁴
- Food and liquids cooked or stored in **lead crystal** or **lead-glazed pottery or porcelain** may contain lead.
- Folk remedies, such as "**greta**" and "**azarcon**," used to treat an upset stomach.

Health Effects of Lead

Lead affects the body in many ways. It is important to know that even exposure to low levels of lead can severely harm children.

In children, exposure to lead can cause:

- Nervous system and kidney damage
- Learning disabilities, attention-deficit disorder, and decreased intelligence
- Speech, language, and behavior problems
- Poor muscle coordination
- Decreased muscle and bone growth
- Hearing damage

While low-lead exposure is most common, exposure to high amounts of lead can have devastating effects on children, including seizures, unconsciousness, and in some cases, death.

Although children are especially susceptible to lead exposure, lead can be dangerous for adults, too.

In adults, exposure to lead can cause:

- Harm to a developing fetus
- Increased chance of high blood pressure during pregnancy
- Fertility problems (in men and women)
- High blood pressure
- Digestive problems
- Nerve disorders
- Memory and concentration problems
- Muscle and joint pain

⁴ In 1978, the federal government banned toys, other children's products, and furniture with lead-containing paint. In 2008, the federal government banned lead in most children's products. The federal government currently bans lead in excess of 100 ppm by weight in most children's products.

Check Your Family for Lead

Get your children and home tested if you think your home has lead.

Children's blood lead levels tend to increase rapidly from 6 to 12 months of age, and tend to peak at 18 to 24 months of age.

Consult your doctor for advice on testing your children. A simple blood test can detect lead. Blood lead tests are usually recommended for:

- Children at ages 1 and 2
- Children or other family members who have been exposed to high levels of lead
- Children who should be tested under your state or local health screening plan

Your doctor can explain what the test results mean and if more testing will be needed.

Other Sources of Lead

Lead in Drinking Water

The most common sources of lead in drinking water are lead pipes, faucets, and fixtures.

Lead pipes are more likely to be found in older cities and homes built before 1986.

You can't smell or taste lead in drinking water.

To find out for certain if you have lead in drinking water, have your water tested.

Remember older homes with a private well can also have plumbing materials that contain lead.

Important Steps You Can Take to Reduce Lead in Drinking Water

- Use only cold water for drinking, cooking and making baby formula. Remember, boiling water does not remove lead from water.
- Before drinking, flush your home's pipes by running the tap, taking a shower, doing laundry, or doing a load of dishes.
- Regularly clean your faucet's screen (also known as an aerator).
- If you use a filter certified to remove lead, don't forget to read the directions to learn when to change the cartridge. Using a filter after it has expired can make it less effective at removing lead.

Contact your water company to determine if the pipe that connects your home to the water main (called a service line) is made from lead. Your area's water company can also provide information about the lead levels in your system's drinking water.

For more information about lead in drinking water, please contact EPA's Safe Drinking Water Hotline at 1-800-426-4791. If you have other questions about lead poisoning prevention, call 1-800 424-LEAD.*

Call your local health department or water company to find out about testing your water, or visit [epa.gov/safewater](https://www.epa.gov/safewater) for EPA's lead in drinking water information. Some states or utilities offer programs to pay for water testing for residents. Contact your state or local water company to learn more.

* Hearing- or speech-challenged individuals may access this number through TTY by calling the Federal Relay Service at 1-800-877-8339.

Renovating, Repairing or Painting a Home with Lead-Based Paint

If you hire a contractor to conduct renovation, repair, or painting (RRP) projects in your pre-1978 home or childcare facility (such as pre-school and kindergarten), your contractor must:

- Be a Lead-Safe Certified firm approved by EPA or an EPA-authorized state program
- Use qualified trained individuals (Lead-Safe Certified renovators) who follow specific lead-safe work practices to prevent lead contamination
- Provide a copy of EPA's lead hazard information document, *The Lead-Safe Certified Guide to Renovate Right*

RRP contractors working in pre-1978 homes and childcare facilities must follow lead-safe work practices that:

- **Contain the work area.** The area must be contained so that dust and debris do not escape from the work area. Warning signs must be put up, and plastic or other impermeable material and tape must be used.
- **Avoid renovation methods that generate large amounts of lead-contaminated dust.** Some methods generate so much lead-contaminated dust that their use is prohibited. They are:
 - Open-flame burning or torching
 - Sanding, grinding, planing, needle gunning, or blasting with power tools and equipment not equipped with a shroud and HEPA vacuum attachment
 - Using a heat gun at temperatures greater than 1100°F
- **Clean up thoroughly.** The work area should be cleaned up daily. When all the work is done, the area must be cleaned up using special cleaning methods.
- **Dispose of waste properly.** Collect and seal waste in a heavy duty bag or sheeting. When transported, ensure that waste is contained to prevent release of dust and debris.

To learn more about EPA's requirements for RRP projects, visit [epa.gov/getleadsafe](https://www.epa.gov/getleadsafe), or read *The Lead-Safe Certified Guide to Renovate Right*.

Where Lead-Based Paint Is Found

In general, the older your home or childcare facility, the more likely it has lead-based paint.¹

Many homes, including private, federally-assisted, federally-owned housing, and childcare facilities built before 1978 have lead-based paint. In 1978, the federal government banned consumer uses of lead-containing paint.²

Learn how to determine if paint is lead-based paint on page 7.

Lead can be found:

- In homes and childcare facilities in the city, country, or suburbs,
- In private and public single-family homes and apartments,
- On surfaces inside and outside of the house, and
- In soil around a home. (Soil can pick up lead from exterior paint or other sources, such as past use of leaded gas in cars.)

Learn more about where lead is found at [epa.gov/lead](https://www.epa.gov/lead).

¹ "Lead-based paint" is currently defined by the federal government as paint with lead levels greater than or equal to 1.0 milligram per square centimeter (mg/cm²), or more than 0.5% by weight.

² "Lead-containing paint" is currently defined by the federal government as lead in new dried paint in excess of 90 parts per million (ppm) by weight.

Identifying Lead-Based Paint and Lead-Based Paint Hazards

Deteriorated lead-based paint (peeling, chipping, chalking, cracking, or damaged paint) is a hazard and needs immediate attention. **Lead-based paint** may also be a hazard when found on surfaces that children can chew or that get a lot of wear and tear, such as:

- On windows and window sills
- Doors and door frames
- Stairs, railings, banisters, and porches

Lead-based paint is usually not a hazard if it is in good condition and if it is not on an impact or friction surface like a window.

Lead dust can form when lead-based paint is scraped, sanded, or heated. Lead dust also forms when painted surfaces containing lead bump or rub together. Lead paint chips and dust can get on surfaces and objects that people touch. Settled lead dust can reenter the air when the home is vacuumed or swept, or when people walk through it. EPA currently defines the following levels of lead in dust as hazardous:

- 10 micrograms per square foot ($\mu\text{g}/\text{ft}^2$) and higher for floors, including carpeted floors
- 100 $\mu\text{g}/\text{ft}^2$ and higher for interior window sills

Lead in soil can be a hazard when children play in bare soil or when people bring soil into the house on their shoes. EPA currently defines the following levels of lead in soil as hazardous:

- 400 parts per million (ppm) and higher in play areas of bare soil
- 1,200 ppm (average) and higher in bare soil in the remainder of the yard

Remember, lead from paint chips—which you can see—and lead dust—which you may not be able to see—both can be hazards.

The only way to find out if paint, dust, or soil lead hazards exist is to test for them. The next page describes how to do this.

Reducing Lead Hazards, continued

If your home has had lead abatement work done or if the housing is receiving federal assistance, once the work is completed, dust cleanup activities must be conducted until clearance testing indicates that lead dust levels are below the following levels:

- 10 micrograms per square foot ($\mu\text{g}/\text{ft}^2$) for floors, including carpeted floors
- 100 $\mu\text{g}/\text{ft}^2$ for interior windows sills
- 400 $\mu\text{g}/\text{ft}^2$ for window troughs

Abatements are designed to permanently eliminate lead-based paint hazards. However, lead dust can be reintroduced into an abated area.

- Use a HEPA vacuum on all furniture and other items returned to the area, to reduce the potential for reintroducing lead dust.
- Regularly clean floors, window sills, troughs, and other hard surfaces with a damp cloth or sponge and a general all-purpose cleaner.

Please see page 9 for more information on steps you can take to protect your home after the abatement. For help in locating certified lead abatement professionals in your area, call your state or local agency (see pages 15 and 16), [epa.gov/lead](https://www.epa.gov/lead), or call 1-800-424-LEAD.

Reducing Lead Hazards

Disturbing lead-based paint or removing lead improperly can increase the hazard to your family by spreading even more lead dust around the house.

- In addition to day-to-day cleaning and good nutrition, you can **temporarily** reduce lead-based paint hazards by taking actions, such as repairing damaged painted surfaces and planting grass to cover lead-contaminated soil. These actions are not permanent solutions and will need ongoing attention.
- You can minimize exposure to lead when renovating, repairing, or painting by hiring an EPA- or state-certified renovator who is trained in the use of lead-safe work practices. If you are a do-it-yourselfer, learn how to use lead-safe work practices in your home.
- To remove lead hazards permanently, you should hire a certified lead abatement contractor. Abatement (or permanent hazard elimination) methods include removing, sealing, or enclosing lead-based paint with special materials. Just painting over the hazard with regular paint is not permanent control.

Always use a certified contractor who is trained to address lead hazards safely.

- Hire a Lead-Safe Certified firm (see page 12) to perform renovation, repair, or painting (RRP) projects that disturb painted surfaces.
- To correct lead hazards permanently, hire a certified lead abatement contractor. This will ensure your contractor knows how to work safely and has the proper equipment to clean up thoroughly.

Certified contractors will employ qualified workers and follow strict safety rules as set by their state or by the federal government.

Checking Your Home for Lead

You can get your home tested for lead in several different ways:

- A lead-based paint **inspection** tells you if your home has lead-based paint and where it is located. It won't tell you whether your home currently has lead hazards. A trained and certified testing professional, called a lead-based paint inspector, will conduct a paint inspection using methods, such as:
 - Portable x-ray fluorescence (XRF) machine
 - Lab tests of paint samples
- A **risk assessment** tells you if your home currently has any lead hazards from lead in paint, dust, or soil. It also tells you what actions to take to address any hazards. A trained and certified testing professional, called a risk assessor, will:
 - Sample paint that is deteriorated on doors, windows, floors, stairs, and walls
 - Sample dust near painted surfaces and sample bare soil in the yard
 - Get lab tests of paint, dust, and soil samples
- A combination inspection and risk assessment tells you if your home has any lead-based paint and if your home has any lead hazards, and where both are located.

Be sure to read the report provided to you after your inspection or risk assessment is completed, and ask questions about anything you do not understand.

Checking Your Home for Lead, continued

In preparing for renovation, repair, or painting work in a pre-1978 home, Lead-Safe Certified renovators (see page 12) may:

- Take paint chip samples to determine if lead-based paint is present in the area planned for renovation and send them to an EPA-recognized lead lab for analysis. In housing receiving federal assistance, the person collecting these samples must be a certified lead-based paint inspector or risk assessor
- Use EPA-recognized tests kits to determine if lead-based paint is absent (but not in housing receiving federal assistance)
- Presume that lead-based paint is present and use lead-safe work practices

There are state and federal programs in place to ensure that testing is done safely, reliably, and effectively. Contact your state or local agency for more information, visit epa.gov/lead, or call **1-800-424-LEAD (5323)** for a list of contacts in your area.³

What You Can Do Now to Protect Your Family

If you suspect that your house has lead-based paint hazards, you can take some immediate steps to reduce your family's risk:

- If you rent, notify your landlord of peeling or chipping paint.
- Keep painted surfaces clean and free of dust. Clean floors, window frames, window sills, and other surfaces weekly. Use a mop or sponge with warm water and a general all-purpose cleaner. (Remember: never mix ammonia and bleach products together because they can form a dangerous gas.)
- Carefully clean up paint chips immediately without creating dust.
- Thoroughly rinse sponges and mop heads often during cleaning of dirty or dusty areas, and again afterward.
- Wash your hands and your children's hands often, especially before they eat and before nap time and bed time.
- Keep play areas clean. Wash bottles, pacifiers, toys, and stuffed animals regularly.
- Keep children from chewing window sills or other painted surfaces, or eating soil.
- When renovating, repairing, or painting, hire only EPA- or state-approved Lead-Safe Certified renovation firms (see page 12).
- Clean or remove shoes before entering your home to avoid tracking in lead from soil.
- Make sure children eat nutritious, low-fat meals high in iron, and calcium, such as spinach and dairy products. Children with good diets absorb less lead.

³ Hearing- or speech-challenged individuals may access this number through TTY by calling the Federal Relay Service at 1-800-877-8339.
